

# DAY FOUNDATION

## Website Handover & Credentials Guide (Vercel Host)

Generated: 6/27/2026 | Author: Antigravity AI

### 1. Executive Summary

This document contains all security credentials, API keys, and environment variables required to run and maintain the BHTDAY Welfare Foundation website. In this architecture, Vercel is the exclusive hosting platform for the website and backend serverless APIs, while Firebase is used solely as a database engine (Firestore & Realtime Database).

### 2. Environment Variables & API Key Registry

| Variable Name                  | Required Service | Purpose                               |
|--------------------------------|------------------|---------------------------------------|
| VITE_FIREBASE_API_KEY          | Firebase DB      | Database Auth & Credentials           |
| VITE_FIREBASE_PROJECT_ID       | Firebase DB      | Ties website to Firebase project      |
| VITE_RAZORPAY_KEY_ID           | Razorpay Gateway | Receives secure donations             |
| GMAIL_USER                     | Nodemailer SMTP  | Sender account for receipts           |
| GMAIL_APP_PASS                 | Nodemailer SMTP  | Gmail 16-digit secure App Password    |
| VITE_IMGBB_API_KEY             | ImgBB Cloud      | Uploads photos for Gallery/Blogs      |
| VITE_GEMINI_API_KEY            | Gemini AI        | Automated email replying & SEO        |
| VITE_GOOGLE_SHEETS_WEB_APP_URL | Google Sheets    | Syncs candidates & donations to Sheet |

## 3. Step-by-Step Setup Guides

### 3.1 Firebase Project Handover (Database Only)

Note: Firebase is used exclusively as a database; no hosting setup is required.

1. Go to [console.firebase.google.com](https://console.firebase.google.com) and log in.
2. Open your project 'day-foundation' and go to Project settings > Users and permissions.
3. Click 'Add member', enter the owner's Google email, and assign the 'Owner' role.
4. Copy the Web App config keys (API Key, App ID, etc.) from the config screen and paste them into Vercel environment variables.

### 3.2 Gmail SMTP Setup (Automated Emails)

1. Log into your [rawbyteproduction@gmail.com](mailto:rawbyteproduction@gmail.com) account security panel ([myaccount.google.com/security](https://myaccount.google.com/security)).
2. Enable 2-Step Verification.
3. Search for 'App passwords', name it 'Website Email Client', and click Create.
4. Copy the generated 16-digit app password and enter it in `GMAIL_APP_PASS` in your Vercel settings.

### 3.3 Google AI Studio (Gemini API Key)

1. Go to [aistudio.google.com](https://aistudio.google.com) and sign in.
2. Click 'Get API key' in the top-left menu.
3. Click 'Create API key' and copy the resulting string (starts with 'AQ.').
4. Add it to `VITE_GEMINI_API_KEY` environment variable on Vercel.

### 3.4 Razorpay Integration (Donations)

1. Sign up for a business account at [Razorpay.com](https://razorpay.com) and upload verification details.
2. Once verified, go to Settings > API Keys.
3. Generate a key (choose 'Test' key for staging or 'Live' key for actual payments).
4. Copy the Key ID and paste it in `VITE_RAZORPAY_KEY_ID` in Vercel.

### 3.5 ImgBB Cloud Integration (Image Uploads)

1. Register a free account at [api.imgbb.com](https://api.imgbb.com).
2. Click 'Add API Key' on the homepage.
3. Copy the 32-character key and set it in `VITE_IMGBB_API_KEY` on Vercel.

### 3.6 Google Sheets Application Auto-Sync

1. Open your target Google Sheet database in Google Drive.
2. Go to Extensions > Apps Script, paste the bridge script and click Save.
3. Click Deploy > New deployment, choose Web App, set Execute as 'Me' and Who has access to 'Anyone'.
4. Deploy, authorize Google access, copy the Web App URL and set it in VITE\_GOOGLE\_SHEETS\_WEB\_APP\_URL.

## 4. Site Deployment & Launch Guide

### 4.1 Vercel Hosting Setup (Exclusive Host)

1. Push the code repository from the current GitHub repository to the owner's personal GitHub account.
2. Go to vercel.com, log in using the owner's GitHub, and import the repository.
3. Add all the 16 environment variables listed in Section 2 in the Vercel project settings.
4. Click Deploy to publish the website live.
5. (Optional) Go to Settings > Domains, enter your custom domain name (e.g. dayfoundation.org.in), and configure the DNS settings provided by Vercel.

## 5. Handover Sign-off Checklist

- ☐ ] Firebase database project owner transferred.
- ☐ ] Gmail 16-digit App Password configured.
- ☐ ] Google AI Studio Gemini API Key updated.
- ☐ ] Razorpay live business account activated & Key ID set.
- ☐ ] ImgBB API key generated & configured.
- ☐ ] Google Sheets Apps Script Web App deployed and URL set.
- ☐ ] Code repository transferred to owner's GitHub.
- ☐ ] Environment variables configured and project deployed/active in Vercel.
